Re: Site Inspection Tuesday, Lincoln High School Science Building, June 3, 2008,

CBOC Members Attending: Diane Hughes

Steven Corchado, Project Manager for Kitchell, led our tour. Jackie Zeller, principal, also joined the tour. The building will house four chemistry classrooms with a central prep area, emergency eye wash area, conference room and common storage. The high ceilings will enable use of natural light. The building utilizes steel framing and a smokestack.

This building on the southwest edge of the campus will have its own parking lot. The exterior will be decorated with 8X8 tiles with the symbols of periodic table elements.

Then, we toured some of the fifty year old classrooms scheduled to be renovated this summer.
